

School-gen recipe

Easter Chocolate

S'mores

You will need:

- Your assembled solar oven made out of a pizza box
- Easter chocolate
- Marshmallows
- A packet of plain biscuits (we used Vanilla Wine biscuits)

Get started:

1. Break up some of your Easter chocolate into smaller bits. Take one Vanilla Wine biscuit as the base and layer some Easter chocolate and marshmallows on top. Then put another Vanilla Wine biscuit on top to make a biscuit sandwich.
2. Open the lid and load them into your solar oven, place the s'mores out on a sheet of tin foil on the black tray inside. You can easily fit six.
3. Go out into the midday sunshine, set up in a place that will have full sun for a long time, and open the flap of your solar oven. Adjust the flap to reflect as much heat as possible into the oven.
4. You'll have to leave it for a while, but check on it every so often so you can keep it pointed toward the sun.
5. Once they've melted take them out (be careful they will be hot)
6. Leave them a little while to cool and then enjoy them!
